# UPGRADE YOUR HYDRAULIC CONTROL

### PRESENTATION

This catalogue contains the information needed for the selection and proper use of the hydraulic directional control valve BM70, BM100 and BF701 Series.

The design, manufacturing process and controls meet the relevant EU standards and directives on safety and quality. BM70, BM100 and BF701 directional control valve are produced by BLB Srl.

#### WARNINGS

Before using BM70, BM100 and BF701 directional control valves carefully read this catalogue in all its parts. The applications of these products must comply with the information contained in it.

Contact our BLB technical department in all cases in which the correspondence of the product to **the application** requirements is uncertain.

The proper operation of BM70, BM100 and BF701, is strictly subjected to the compliance with the directions, instructions, and specifications stated in this catalogue.

Therefore, operations and uses that require actions other than those herein described and/or approved in advance by BLB srl., may give rise to defects or failures that exempt BLB from all liabilities. To ensure the specifications given in the catalogue, make sure that the maximum parameters are not exceeded during operation.

BLB is not liable for any damage that may be caused to persons or property resulting from misuse of the product. Therefore, consult with the utmost attention the chapter **instructions**.

The catalogue shows the most common configurations. For more detailed information or special requests herein not provided, please contact BLB Srl Sales Department.

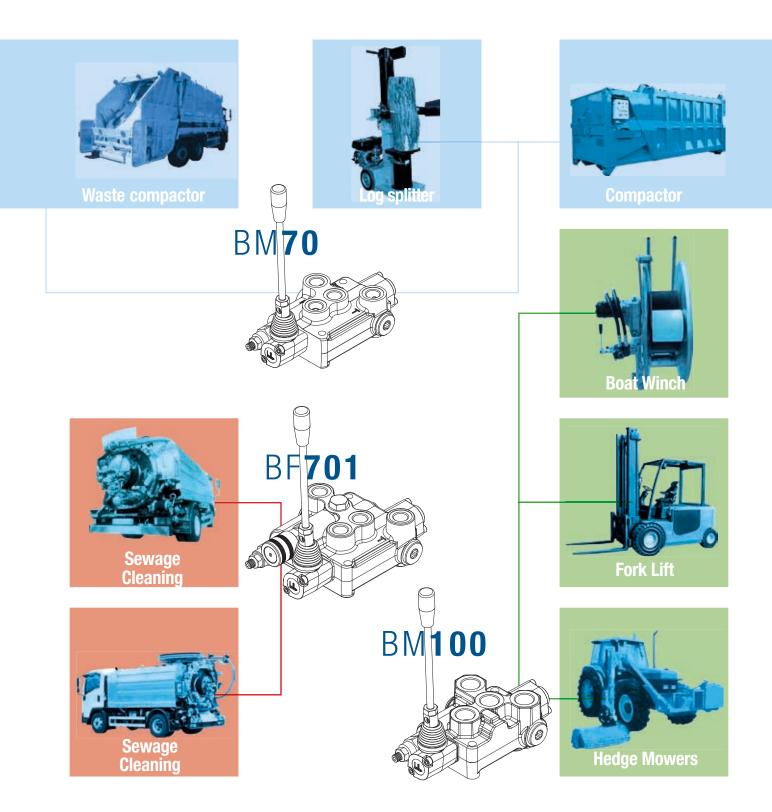

Specifications, drawings and descriptions contained in this catalogue refer to the standard product at the date of publication of this catalogue. Blb, in a perspective of continuous product improvement, reserves the right to make changes at any time and without the obligation of any prior notification.

### **GENERAL INFORMATION** BM70 / BM100

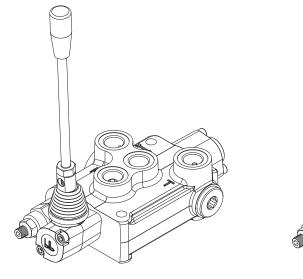

This booklet is meant to be a technical deepening on directional control valves of the BM70 and BM100 series. These monoblock valves are characterized by a single body having following features:

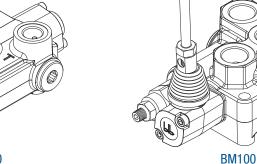

- Sound construction. •
- Compact size.
- **Reduced weight** •

The absence of tie rods and intermediate seals allow monoblock valves to provide:

- Improved dependability. •
- Sturdy valves body for fewer leak points. •
- Lower maintenance.

## **BM70 AUTOSPEED**

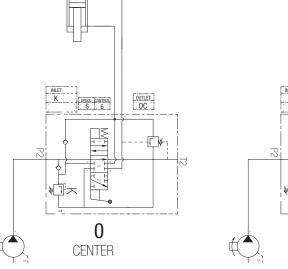

Special valve dedicated to log-splitter applications, both horizontal and vertical. Main features are the fast approach to the log (with max flow and pressure <70 bar) and the following passage to the log-cutting mode (with low flow and max pressure).

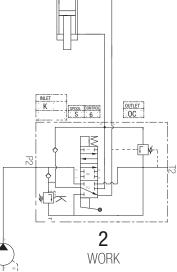

Available with or without the kickout feature (automatic return from back position to center).

Max pump flow: 55/60 l/min - 14.4/15.8 GPM

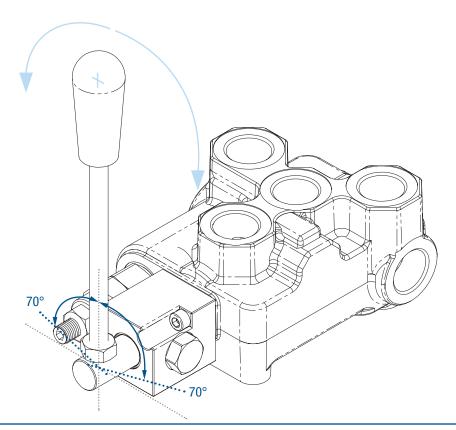

splitte

## **ROTARY CONTROL**

### BM70 / BM100

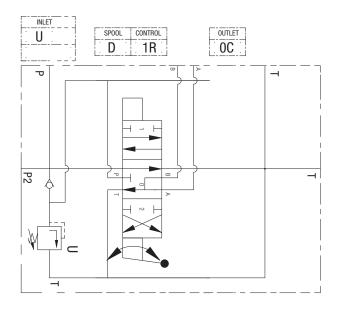

Mainly used in marine equipments to control the speed of the fishing winches motors, rotary control is available on BM70 and BM100 series.

The valve is operated **turning the lever into a range of 70°+70°**. The spool is detended (frictioned) in every position inside the overmentioned range.

Valves are protected against marine corrosion with the **Black Dacromet** treatment and many components are realized in stainless steel.

## **GENERAL INFORMATION** BF701

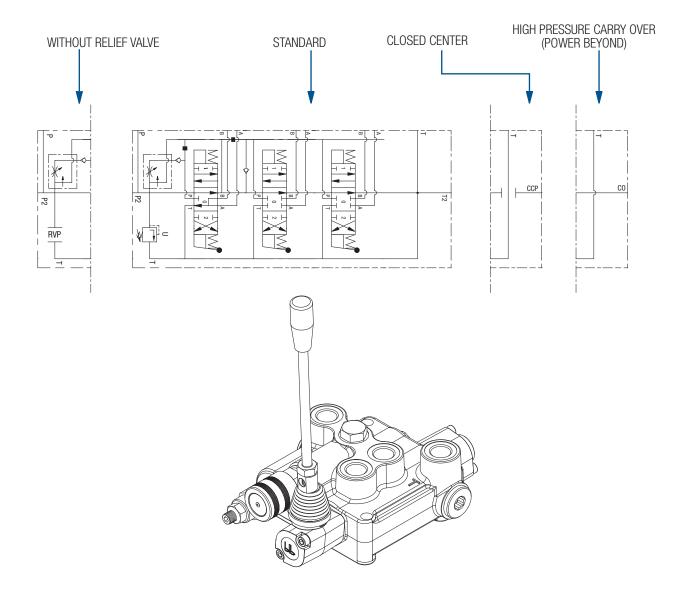

**BF** monoblock valves series derives from BM series and differs from it for having integrated in the inlet a **pressure compensated** flow control either 3/ways priority (RFP) or 2/ways (RFS).

With **RFP** flow control, the exceeding flow is recuperated into the system and allows the simultaneous use of two spools, the fisrt fed by the priority flow (**PF**) and the second fed by the exceeding flow (**EF**).

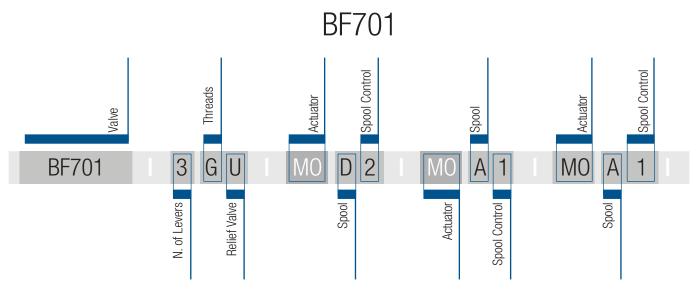

With **RFS** flow control, the exceeding flow goes to tank.

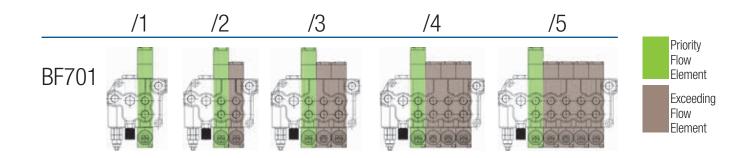

Very important characteristic is that the **flow control only works when a priority element is actuated**; if no priority element is operated, oil goes to tank eliminating loss of flow and unnecessary heating.

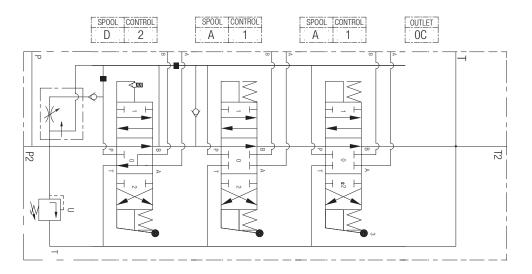

In RFP version, non-priority sections get the whole valve flow when they are individually operated or just the exceeding flow when a priority section is oerated. One or more priority elements are available.

## DESIGNATION

### Relief valves and accessories

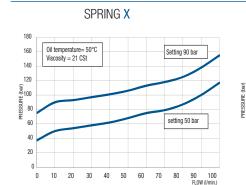

RELIEF VALVE VL80

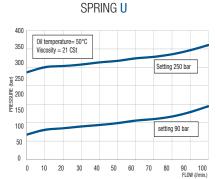

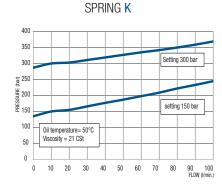

• Standard setting is based on a pre-set flow of 14 I/min.

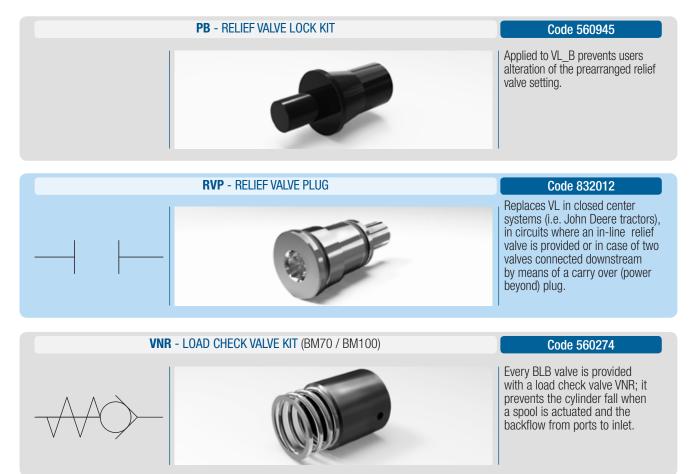

X: Pressure Range 30 ÷ 90 bar - STANDARD SETTING 70 bar
U: Pressure Range 80 ÷ 230 bar - STANDARD SETTING 140 bar
K: Pressure Range 150 ÷ 300 bar - STANDARD SETTING 180 bar
B: Prearranged for lock kit

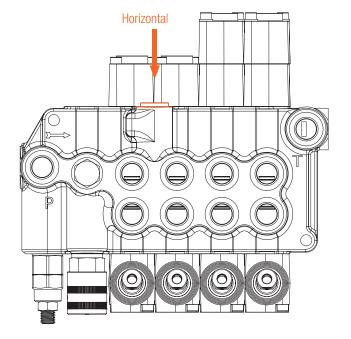

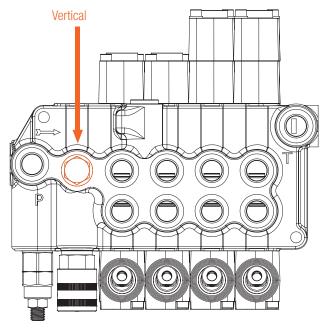

### PRESSURE RANGE VL80

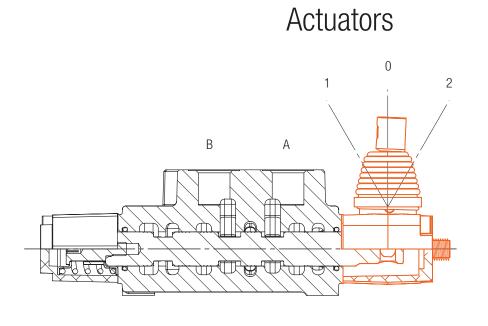

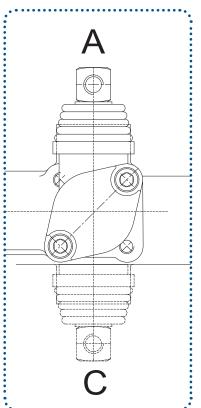

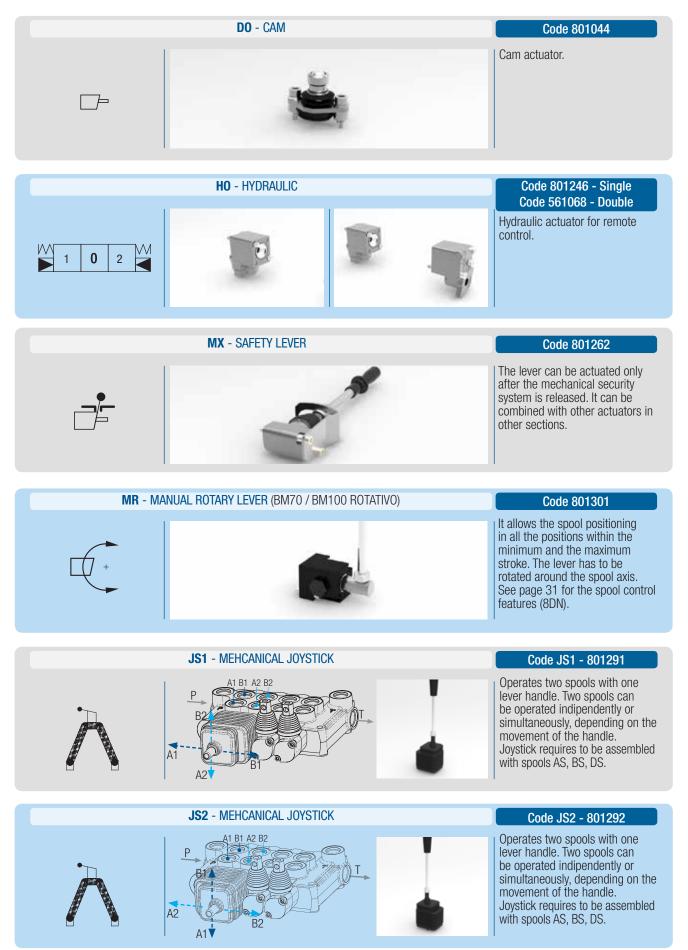

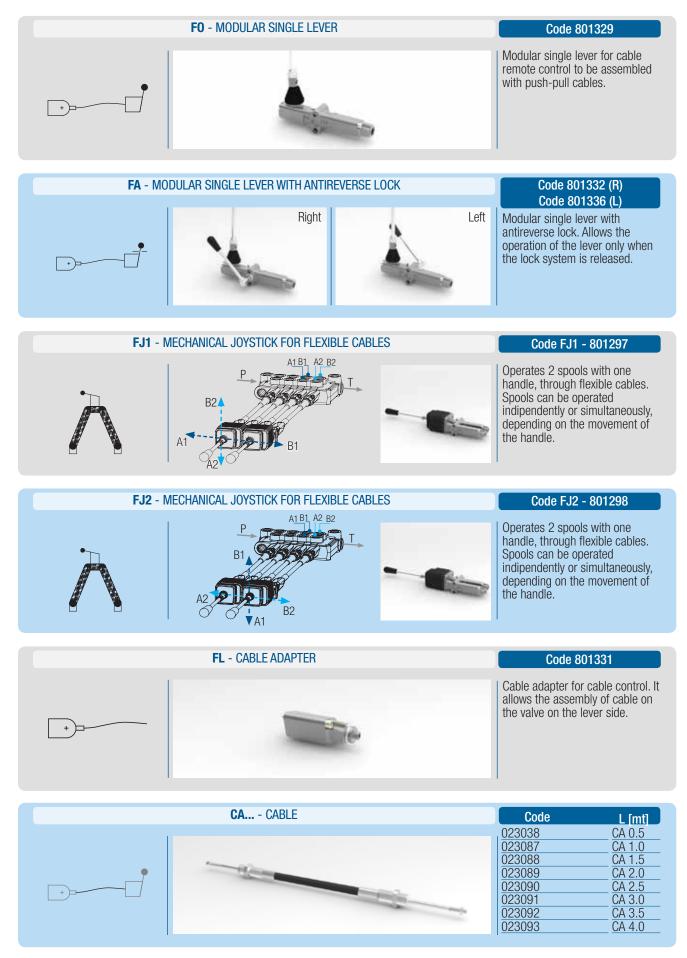

The actuator orientation is "  ${\bf A}$  " if not differently requested

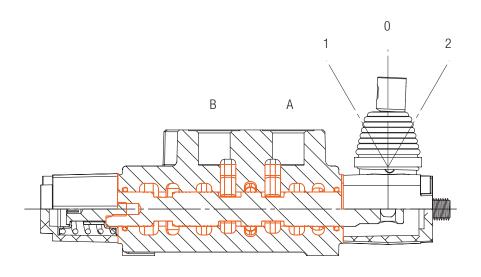

MO - MANUAL LEVER CONTROL	Code 801014
	Standard manual control with lever. Possibility to assembly the lever in vertical or horizontal position. Possibility to assembly the entire manual control in position A(90°) or B(180°).
MW - MANUAL WOTHOUT LEVER	Code 801116
	Manual control as 801014 but the lever is not included.
MC - MANUAL WITH CAM	Code 801010
	Manual control as 801014 with the addition of a cam.

	E0 12V - ELECTRIC OPERATOR	Code 801519
₩ 1 <b>0</b> 2 ₩		The electric remote control is used when the directional control valve has to be placed away from the operator. Electric source required.
	E0 24V - ELECTRIC OPERATOR	Code 801520
1 <b>0</b> 2		The electric remote control is used when the directional control valve has to be placed away from the operator. Electric source required.

	SPOOL CONTROL 26   4 POSITIONS	Code 802309
Spool Z		The spool returns to position 1 when the handle is released. The spool is detented in position 2. To be combined only with spools Z or WS.

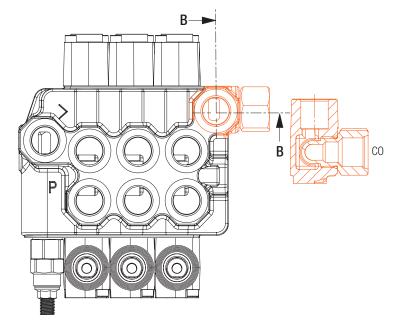

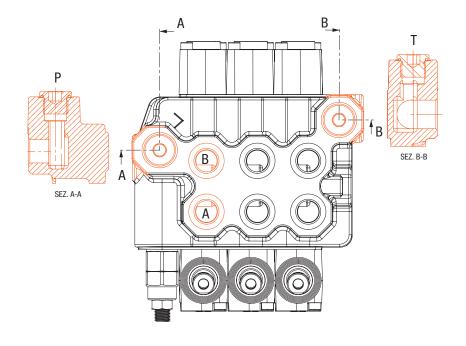

### Fittings and plugs

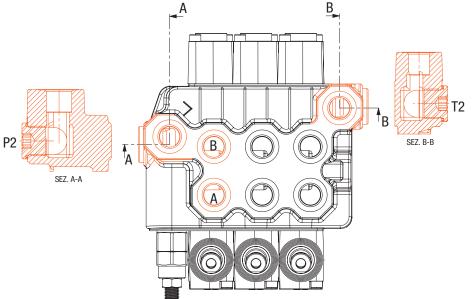

### Inlet / Outlet / Ports

### DESCRIPTION

The purpose of BM70, BM100 and BF701 is to direct the flow circulating in the hydraulic systems, towards the user chosen by the operator (directional spool valves). The function is obtained by moving the spool within a cavity in a controlled and sequential way and opening orifices that, connecting with each other, realize the functional circuits. Functional and construction characteristics are shown in the initial part of the catalogue.

### **CHOICE AND USE**

Before you choose the correct configuration of BM70, BM100 and BF701

### You must identify:

- Performance (pressure, flow, temperature, reliability).
- Functional characteristics of each BM70, BM100 and BF701.
- Section and hydraulic diagram, actuators and controls.
- The machine in which it is built-in (installation, accessibility, connection of the hoses, tank, filter).

### The choice must be made so that BM70, BM100 and BF701

are used within the performance limits listed in the catalogue and in compliance with the operating conditions given in the table below.

HYDRAULIC FLUID		MINERAL OIL According to din 51524
VISCOSITY	Field	10 ÷ 460 mm <sup>2</sup> /sec
VISCUSITY	Optimal	12 ÷ 75 mm <sup>2</sup> /sec
TEMPERATURE	Excursion	-20 ÷ +80 °C
IEWFENAIUNE	Optimal	+30 ÷ +60 °C
MAXIMUM CONTAMINATION LEVEL (Filtro 25 $\mu$ ass. $\mathbb{Q}_{r}$ = 75)		NAS 1638: CLASS 9 – ISO 4406: 20/19/16
ROOM TEMPERATURE		-30 ÷ +60 °C
PRESSURE AND FLOW		SEE CATALOGUE
PRESSURE DROP		SEE CATALOGUE
OIL VELOCITY IN THE TUBES: INLET AND PORTS		6 ÷ 8 m/sec
OIL VELOCITY IN THE TUBES: RETURN		3 ÷ 4 m/sec

For all uses in which functional and performance conditions **are not referable to this catalogue**, please get in contact with BLB technical department. In case of permitted uses ask for written answers and additional specifications relevant to use.

### SPECIAL PRODUCTS

BM70, BM100 and BF701 are characterized by a high number of possible functional combinations. Products with high customization and combinations might not be identifiable in the catalogue.

For such products, BLB provides the necessary advice to identify the optimal functional composition and supplies the documentation required for the installation and proper use.

### USE

### Authorized use.

All applications that meet the specifications described in the sections "TECHNICAL FEATURES" and "CHOICE AND USE."

### Unauthorized use.

- Do not use BM70, BM100 and BF701 in systems without filtration.
- **Do not use** BM70, BM100 and BF701 with fluids other than those listed in the table.
- **Do not use** BM70, BM100 and BF701 **to hold actuators in a fixed position** for periods of time not compatible with the working pressure. It is strictly prohibited to use BM70, BM100 and BF701 as an holding tool. In all cases in wich 0 leakage is required, auxiliary valves, specific for the purpose, have to be installed directly on the actuators.

### SAFETY STANDARDS

The surfaces of BM70, BM100 and BF701 have sharp edges and internal cavities with residual oil. Therefore, during handling operations for storage, control, installation or demolition, testing, maintenance, and disposal it is necessary to:

- Grab the pieces with protective gloves.
- Wear appropriate work clothes and non-slip work shoes.
- Verify the size and weight to use suitable handling equipment.
- Consult the handling mode (see section "Handling and Storage").

### **IDENTIFICATION AND PACKAGING**

**BM70, BM100 and BF701 valves are delivered in closed single boxes or packages with variable sizes and weights**. Each BM70, BM100 and BF701 valve is identified by a label reporting a 6-digit code and a short description of the product, as well as the production lot or in alternative a laser mark containing the same information.

### CHECKS UPON RECEIPT

**Upon delivery**, please check that:

- Packaging and products have not been damaged during shipping.
- The supply is in accordance with the order.
- Accompanying documents are complete and comprehensive.

In case non-conformity or failures are noticed, notify BLB within eight days from receipt date.

**WARNINGS:** BM70, BM100 and BF701 valves are delivered in oilproof plastig bags. The internal cavities contain residual oil retained by the protective caps on ports.

Remove the plastic caps only when the connection hoses have to be assembled.

### HANDLING AND STORAGE

**Before moving the products** it is important to be aware of the size and weight to be moved.

BM70, BM100 and BF701 valves, should be moved carefully and with adequate means for the size and weight of the package, whether it is a single pack or multi pack. It is necessary to take every precaution measures to prevent damage that could compromise the functional efficiency of the products and the safety of anyone present in proximity of the areas in which you operate.

All BLB products need to be stored in a dry place, protected from weathering and possible damages.

When the secondary packaging is removed, BM70, BM100 and BF701 valves should be stored with the oil-resistant protective bags.

### **INSTALLATION**

**Before installing the products**, you must check that they have not been damaged during internal handling and storage operations. In case of long storage before usage, please check that the products are complete with all their parts as originally delivered. In particular, for BM70, BM100 and BF701 valves, check that the protective caps have not been removed. In all cases in which the proper operation of the valve is doubtful, make proper tests on bench and replace those parts found faulty (oxidized, damaged, etc...).

### In case of any uncertainty or doubt please contact an authorized BLB service centre.

Make sure that the system characteristics are those laid down in the project (filtration, oil type and viscosity, temperature control, tank capacity, etc ...).

**IMPORTANT: the installation of BM70, BM100 and BF701** calls for tightening of screws, fittings and hoses. For each of these elements, you must use the appropriate tools and wrenches that allow the control of the tightening torque. Excessive tightening causes deformations to the valve, compromising the correct operation of the same. A weak tightening may affect the functionality and safety. Use the following table to determine the correct tightening torque for each element. Do not use provisional extension and do not act with bumps on the wrenches.

	PART	THREAD	Nm
Fixing screws	BM70/100, BF70	M10 x 1,5 8.8	45
Connectors/Plugs		1/2" G ; 7/8" -14 UNF2B	50; 55
		3/4" G ; 1" 1/16-12 UNF2B	95; 100
Valves, plugs	VL80	M24 x 1,5	80

BM70, BM100 and BF701 installation procedures consist of 3 steps:

#### First step: valve fixing.

Prepare the area where BM70, BM100 and BF701 will be placed, in order to ease the assembly, the hose connection and the adjustments during start-up and testing.

Install the valve in shock and vibration-free areas.

While moving the valve do not cause accidental bumps or shocks and follow the indications listed in the "HANDLING" paragraph.

The valve must be secured with M10 screws through the holes provided. Apply thread-lock accessories.

The mounting position is irrelevant as long as the valve is resting on a rigid and perfectly flat surface.

This is necessary so that the tightening of the screws does not cause harmful deformation.

### Second step: hydraulic hoses connection (inlet, ports, tank).

Use hoses and fittings suitable for indicated max flow and pressure. It is strictly prohibited the usage of conic fittings and the reversal of connections between inlet (P, P2) and tank (T, T2) lines.

Remove protective plugs from the valve ports just before connecting the hoses to prevent contamination of the circuit with dust or other materials. Do not use tape wrapped on threads to seal. Tighten the fittings with the torque indicated in the table.

### Third step: Sytem starting

**Before starting, "wash the system"** by fluxing oil from an auxiliary system. Start the system and then operate the actuators individually and not under load.

Operate slowly until the system is filled with oil. Set the relief valves and carry out a complete testing of the system. In case the initial fluxing is not possible, clean the filters at the end of testing.

Do not perform calibration of valves without having first applied a pressure gauge on the inlet section of the valve and on line where deemed necessary.

### MAINTENANCE

**Routine Maintenance** 

- Periodically check the functionality of the relief valve of **BM70**, **BM100 and BF701**.
- Periodically clean the filters of the system. Excessive oil contamination causes irregular operation of the spool and of the relief valve.

### Preventative maintenance

- At each oil change of the system replace the filters.
- Check the calibration of the pressure relief valve and replace if deemed no longer reliable.

### Unscheduled maintenance

In case of interventions for which it is necessary to disassemble the valve, consult BLB authorized service centers.

### DEFECTIVENESS AND DISMANTLING

#### Defectiveness

BM70, BM100 and BF701 valves are delivered tested. Defectiveness found during the initial installation generally derive from failing to comply with the directions outlined or for damages suffered during transportation.

During the operating time of BM70, BM100 and BF701 valves it is possible to notice the following defectiveness.

### Spool sticking

CAUSE	CORRECTIVE ACTION
Excessive working pressure	Check the working pressure and the valves settings. Eliminate water hammer (pressure peaks).
Excessive oil contamination	Replace oil and filters. Wash the system with auxiliary fluxing. Carry out maintenance at shorter intervals.
Valve not suitable for the application	Check and in case review the choice of the valve.
Additional controls and actuators	Check or change the additional actuators.
Over-tightening of the fixing screws	Loosen fittings and fastening screws.
Support base with severe geometric errors (not flat)	Adopt additional brackets or elastic elements.
Excessive working temperature	Check the valves setting and the pressure drops of the system.

### Oil leakage at the spool

CAUSE	CORRECTIVE ACTION
Excessive working temperature	Increase the amount of oil in the system (by increasing the tank size). Decrease the pressure drop in the system. Improve the oil cooling. Check or change the valves setting. Replace seals or complete relief valves.
Excessive oil pressure	Check the working pressure and the valves settings. Eliminate water hammer (pressure peaks).
Valve not suitable for the application	Check and in case review the choice of the valve.
Seals worn or broken	Replace the seals.
Excessive flow for the valve	Loosen fittings and fastening screws.
Backpressure on tank line	Check for possible tight spots towards tank.

### Excessive internal leakage

CAUSE	CORRECTIVE ACTION
Excessive working pressure	Check the working pressure and the valves settings. Eliminate water hammer (pressure peaks).
Excessive temperature of oil	Improve the oil cooling. Check or change the valves setting. Replace seals or complete relief valves.
Unsuitable application	Check and in case review the choice of the valve.
Valve seals worn or broken	Replace seals or complete relief valves.

#### Spare parts

The spare parts available are shown in this catalogue.

Replace the parts to be changed only with original spare parts.

To correctly perform any replacements, comply with the relevant technical specifications (sheets, assemblies, bill of materials, procedures) provided by Blb.

### Dismantling

BM70, BM100 and BF701 valves no longer usable must be disassembled to split the parts constituting them. Separate the metal parts from those in synthetic material or rubber.

Do not dispose part and the residual oil in them contained in the environment.

### WARRANTY AND LIABILITY LIMITS

BLB products are exclusively appointed to professional operators and users. Therefore, in warranty topics, it is not applied the discipline of Decree-Law no. 24 of 02-02-2002 in performance of European Directive 1999/44/EC.

All products are warranted for a period of **12 (twelve) months** from date of shipment from BLB to be free from defects in materials and workmanship under:

- Correct use.
- Normal operating conditions.
- Proper application.

BLB's obligation under this warranty is limited, at BLB's option, ex-factory, to the repair or exchange, of any BLB product or part, which proves to be defective as provided herein.

BLB reserves the right to either inspect the product at Buyer's location or require it to be returned, free of charge, to the factory for inspection. Any description of goods, including any reference to Buyer's specification and any description in catalogues, circulars and other written material published by BLB is for the sole purpose of identifying the products and does not create an express warranty that the goods conform to the sample or model.

Buyer is the sole responsible for determining the suitability of goods sold hereunder for Buyer's use.

BLB reserves the right to discontinue, modify or revise the specifications of the products described herein. All details and components may vary depending on the installation.

The above warranty does not extend to all parts typically subjected to sliding or rolling friction and wear.

The warranty is also excluded on parts potentially subjected to oxidation or corrosion if not properly used or maintained.

The above warranty does not extend to goods damaged or subjected to accident, abuse or misuse after shipment form BLB's factory nor to goods altered or reapired by anyone other than authorized BLB's representatives.

BLB will in no event be liable for any incidental or consequential damage nor for any sum in excess of the price received for the goods for which liability is claimed. Equipment manufactured by third parties and included in the supply together with the material produced by BLB are subjected to the warranty conditions of the parts producer.

BLB is not subjected to warranty obligations on breakdowns, damages, malfunctions, failures, or inefficiency resulting from wrong installation, intentional or unintentional tampering, poor maintenance, negligence or incompetence of the end user.

Modifications or repairs carried out by people not specifically authorized in writing by BLB will invalidate the warranty.

Late or non-payment, even partial, of the supplys cancels the warranty.

Warranty conditions do not confer to the customer the right to suspend or defer the payments which will have to be made in any case under the conditions agreed and specified in the BLB order confirmations. BLB reserves the right to cancel the warranty if:

- Labels or tags with the producer mark, product code and serial number have been deleted or removed.
- The product has been modified or machined without express authorization given by BLB.
- The product has not been used in accordance with the instructions provided or for purposes other than those for which it has been designed.

Warranty is recognized only to BLB's direct customers. Anyone in possession of BLB products, which however have been bougth through third parties (distribuotrs, dealers, installers or manufacturers of any kind), will have to contact the direct supplier for any eventual warranty claim.

### THERE ARE NO EXPRESS WARRANTIES OTHER THAN THOSE SPECIFICALLY DESCRIBED HEREIN.

The Court of Justice of BLB's seat (Vicenza – Italy) is the only competent for any controversy.

### TERMS & CONDITIONS OF SALE

General sales conditions may differ from Country to Country. BLB sales department will send all necessary information upon request. For anything not specified herein, the norms of the Civil Code in matter apply.
